

COLD TOLERANT

DROUGHT TOLERANT

ADAPTED TO CUTTING

ADAPTED TO GRAZING

QUICK FACTS

MEDIUM HEADING

KORA tall fescue is has its origins in a breeding program in Central Europe. This parentage resulted in a variety that is very cold tolerant and very drought tolerant due to the natural weather conditions in that area. The medium maturity date of **KORA** is a benefit in most areas of the United States and Canada because the early maturing varieties such as Fawn mature too early to ensure they can be harvested for high quality hay. In pasture production systems, the early types are ready to graze before most fields have dried out sufficiently to allow hoof traffic.

ADAPTATION

GRAZING	EXCELLENT
HAY	EXCELLENT
SILAGE	GOOD
GREEN CHOP	EXCELLENT
OVERSEEDING	GOOD
FROST SEEDING	NOT RECOMMENDED

SEEDING RATE

25 lbs/acre

TRIAL DATA

	DM Yield Tons/acre	Grazing Tons/acre
KORA	5.38	1.61
SELECT	5.29	1.34
BRONSON	4.57	1.24
KY 31	5.74	1.25
TF 33	5.41	1.22

Data from University of Wisconsin
Cool Season Forage Grass Variety Trial, 2000

USE

KORA is best used in the Northern portion of the Tall Fescue growing area. With its improved grazing intake over other Tall Fescue varieties, **KORA** provides all the benefits of Tall Fescue without the palatability problems observed with many Tall Fescue varieties. **KORA** is well suited to hay production, stockpiling or grazing throughout the growing season.

SELLING POINTS

HIGH FORAGE YIELD

VERY PALATABLE

ENDOPHYTE FREE

GOOD WINTER HARDINESS
