

# PROFESSIONALS' CHOICE™

30% Annual Ryegrass

30% Perennial Ryegrass

20% Tall Fescue

20% Orchardgrass

## Utility Pasture Mixture

Utility Pasture is a mixture of annual ryegrass, perennial ryegrass, forage type tall fescue and orchardgrass. This is a great all around pasture blend for grazing and hay fields where no legumes are desired. The ryegrass gives quick establishment with lots of good nutritious forage. The tall fescue and orchardgrass give a durable sod and good summer time forage. The mixture is designed to be used for many purposes from horses, cows, sheep, goats and is great for hay or grazing.

**Annual Ryegrass** - Very similar to perennial ryegrass, except it is an annual grass. Germinates rapidly and provides early growth. Used extensively for pasture, hay, silage and cover crops. Adapted to a wide range of soil conditions. Palatable, tolerates heavy grazing.

**Perennial Ryegrass** - Palatable and nutritious cool-season bunchgrass often used on lowlands, soil with poor drainage, and on acidic soils. Does well in cool, moist regions with mild winters. Grows well on heavy soil. Tolerates heavy grazing. Tetraploid ryegrass are more vigorous, leafy, drought resistant and palatable than diploid varieties. Produces early vigorous growth.

**Forage Type Tall Fescue** - used for its palatability, excellent spring vigor, deep root system which produces a tough sod when seed thickly and grazed or mowed. It is tolerant of poor drainage, and is also drought resistant. Production of forage is abundant with irrigation and high fertility levels. Forage Type Tall Fescue is adapted to a wide range of soil and climatic conditions.

**Orchardgrass** - Rapid growing bunchgrass which has the ability to grow on relatively poor soils. If adequately fertilized, production is distributed well through the growing season. Withstands both heat and drought. Needs lime on acidic soils. Adapted to irrigation areas and high rainfall mountains of the Pacific Northwest.

### New Pasture Seeding Rate:

Broadcast - 40 to 50 lbs per acre

Drilled - 15 - 25 lbs per acre

### Distributed by:

### Pasture rejuvenation Seeding Rate:

Broadcast - 20 - 25 lbs per acre

Drilled - 10 - 15 lbs per acre
